## 1. PREMISE AND INTRODUCTION

### 1.1 STATE OF THE PANDEMIC - REGULATORY PROTOCOLS - POSSIBLE SCENARIOS

In relation to the contents of the Prime Ministerial Decree of March 2, 2021, of the decree-law of March 13, 2021, n. 30, of the decree-law of 1 April 2021, no. 44 and in accordance with the provisions of art. 6 of the D.L. April 22, 2021 (shows open to the public), as well as the D.L. May 18, 2021 n. 65, with a view to being able to restart sports activities of contact, also of a competitive nature, with the public in attendance, regarding the now upcoming scheduling of the **"Rainbow Cup"** international events, it was decided to establish within the BENETTON RUGBY TREVISO Srl - SSD a Working Group which, taking into account the provisions in force regarding the containment of the epidemiological risk COVID-19, with the contribution of the Italian Federation and other International Rugby Bodies, has developed this document, with the aim of identifying guidelines for a better management of rugby competitions, through the **"epidemiological risk containment measures for the organization for rugby competitions in open door mode, with a reduction of the public (currently within the limit of 1,000 spectators) compared to the authorized capacity"**.

The purpose of this document is to propose anti-contagion measures designed to carry out sporting events in safety with the presence of the public attending the matches, occupying the stands, in compliance with the anti-contagion measures reported therein, despite the protraction of the epidemiological emergency, hopefully initiated to the decompression phase.

The Government has in fact decided with D.L. of 18 May 2021 n. 65 that *"With effect from 1 June 2021, **in the yellow zone**, PUBLIC PRESENCE is ALLOWED for competitive events and competitions recognized as being of pre-eminent national interest with a provision of the Italian National Olympic Committee (CONI) and the Italian Committee Paralympic (CIP), concerning individual and team sports, organized by the respective national sports federations, associated sports disciplines, sports promotion bodies or by international sports organizations, and also to sports events and competitions other than those referred to in art. 5 of the D.L. n. 52 OF 2021 (see art.5 of D.L. 65/2021), exclusively with pre-assigned seats and on condition that respect for the interpersonal distance of at least one meter is ensured both for spectators who are not habitually cohabiting, and for staff.*

*The permitted capacity cannot exceed 25% of the maximum authorized and, in any case, the maximum number of spectators cannot exceed 1,000 for outdoor installations and 500 for indoor installations.*

***Based on art. 5, co. 3 of the D.L. 22 April 2021 n. 52, in relation to the progress of the epidemiological situation and the characteristics of the sites and outdoor events, a different maximum number of spectators can be established, in compliance with the principles established by the Technical-Scientific Committee, with suitable guidelines to prevent or reduce the risk of contagion adopted by the Undersecretary with responsibility for sport matters.***

*The activities must be carried out in compliance with the guidelines adopted by the Presidency of the Council of Ministers - Department for Sport and the Sports Medical Federation, on the basis of the criteria defined by the CTS. When it is not possible to ensure compliance with the conditions referred to in this article, the sporting events and competitions referred to in this paragraph take place without the presence of the public".*

## 2. OBJECTIVES OF THE PROTOCOL

Taking into account the indications of the Government, the Ministries, the FIR, the Federations and International Organizations, issued for the conduct of open-door matches, the assessments carried out and reported in this document have been developed in order to be able to carry out competitions with the public in the compliance with the anti-contagion measures known today.

In detail, without prejudice to the measures related to the purely sporting part (managed by Benetton Rugby in the "Covid Prevention Plan -19, RESUMPTION PROTOCOL OF TRAINING & COMPETITIVE ACTIVITIES - MONIGO STADIUM EVENTS AND EVENTS WITHOUT PUBLIC, last revision of 26/04 / 2021), the additional areas of COVID risk are represented by public access, albeit limited, and its management.

As already happened for closed-door matches, there will be a "**Committee for the application and verification of the rules**" which will integrate the controls provided for in the Prevention Plan with the measures represented in this document.

To this end, Benetton Rugby Treviso Srl -SSD, with reference to the specific areas and activities typically present within the sports facility, intends to outline some measures necessary to avoid contagion from SARS-CoV-2 in order to guarantee the carrying out of the events in respect of health and safety - including public ones - as well as towards sports subjects and professionals, including spectators who may be present in the various areas made available to them.

The purpose of the following document is to outline the best configuration that the stadium can take on the day of the match.

The organizational model adopted may in any case be remodeled, depending on the progress of the epidemiological situation and the indications of the competent and scientific authorities involved for the control and governance of the emergency state.

The following indications are strictly linked to the state of the epidemiological emergency from Covid-19, which although protracted over time, hopefully and in an evolutionary way, could be less prevalent (due to restrictions to be implemented from region to region), in the period of development of the next competitions, which will take place in outdoor sports facilities, during the spring - summer season, where social distancing and the temporary and dynamic nature of the events, will favor the proper

conduct of activities, always and in any case according to changes and adaptations required by the constantly evolving medical-health and regulatory scenarios.

The prevention and protection measures will be a reference for all the individual phases of the event and will have the main objective of guaranteeing the public, the athletes and their technical staff, the competition officials and all the professionals present, the minimum standards of safety in terms of biological risk management related to Covid-19.

This document therefore contains, in relation to the aforementioned risk, measures that follow the logic of precaution and the prescriptions of the legislator, the indications of the Health Authority, of the International Rugby Bodies, expressed with the relative operational protocols at the date of revision of the FIR Protocol, drawn up, as a guideline, with the purpose of "REGULATION FOR THE CONTRAST TO THE DISSEMINATION OF THE VIRUS SARS COV-2 ON THE OCCASION OF RUGBY SPORTS COMPETITIONS FOR" OPEN TO THE PUBLIC WITH CAPACITY REDUCTION UP TO 1,000 SPECTATORS " **as well as the Presidency of the Council of Ministers, Department for Sport (guidelines for the organization of sporting events and competitions drawn up pursuant to Legislative Decree 22 April 2021 n.52 and Legislative Decree 18 May 2021 n.65, of 1 June 2021 ).**

The structure of the Protocol is based on fundamental elements such as:

- the application of the prevention and protection measures set out in the shared Protocol for the resumption of sports activities.
- the application of the prevention and protection measures for athletes and technical staff issued by World Rugby, Six Nations (hereinafter SNRL), EPCR, PRO 14, Federal regulatory protocols for the part relating to sporting practice.
- the clear separation of the groups presents within the different areas of the event, in particular of players and technical staff.
- the distancing of those present, both inside the sports facilities and in the outdoor areas, including the access and exit phases.
- the separation and differentiation of the paths.
- access control.
- encouragement on the implementation of appropriate hygiene measures.
- the use of appropriate PPE.

- the implementation of specific cleaning and sanitizing procedures for all the rooms and areas used.

All the procedures and operational indications contained in this document have been proposed in consideration of the rules, instructions, technological and scientific knowledge issued by the various competent Authorities and available at the time of writing.

It is clear that this document will be promptly updated as each of these conditions changes and will always and, in any case, refer to the regulations in force at the time it will be possible to implement them.

In general, it is considered appropriate to note that the implementation of the anti-contagion measures do not entail a different assessment of the Safety - Security aspects as the total number of the public that is expected to be able to welcome, in compliance with the anti-contagion measures, it is lower than that allowed by the practicability of the sports facility issued by the competent Institutional Bodies.

### 3. INTERESTED SUBJECTS

#### 3.1 INTERESTED SUBJECTS

For a better identification of these subjects, for this Plan, the types of activities described below have been outlined.

##### Subjects and activities present in the sports facility, depending on the course of the event / match

- A. Stadium owner/Owner (Ministerial Decree 18.03.96 and subsequent amendments).
- B. Owner(s) of the events to be held, which will be identified in summary with the term organizer (art.19 D.M. 18.03.96 and subsequent amendments).
- C. << Event Management Delegate of the Organizer who must be present at the event (Ministerial Decree 13.8.2019) >>.
- D. Head of the Prevention and Protection Service of the Stadium Owner and of the Organizing Company/s.
- E. Occupational Physician of the Stadium Owner and of the Organizing Company/s.
- F. Responsible for the structural and stadium engineering intervention of the stadium.
- G. Other components related to the management of safety and health prevention.
  
- H. << Managers / Supervisors of the prevention and protection service of the owner and the Organizer (Legislative Decree 81/2008 and subsequent amendments) >>.
- I. Employees, who work inside the Stadium on behalf of the Owner (Legislative Decree 81/2008 and subsequent amendments).
- J. << Employees, who work inside the Stadium on behalf of the Organizer (Legislative Decree 81/2008 and subsequent amendments) >>.
- K. Contracting companies that perform work on behalf of the owner / owner of the Stadium (contract or work contract) - (Legislative Decree 81/2008 and subsequent amendments).
  - Business employers
  - Employees of contractors.
- L. Contracting companies that perform works on behalf of the Stadium organizer (contract or work contract) - (Legislative Decree 81/2008 and subsequent amendments).
  - Business employers
  - Employees of contractors.
- M. Self-employed workers who work on behalf of the Organizer/User Company (eg steward; staff).
- N. Self-employed workers who work on behalf of the Owner.
- O. Companies, which carry out their activities inside the Stadium as they are equipped with autonomous spaces and premises (Legislative Decree 81/2008 subsequent amendments).
- P. Athletes, referees and officials (ball boys, etc.).
- Q. Appointed by FIR.
- R. Appointed by SNRL.
- S. Medical Officer COVID-19 refers to the person responsible for ensuring that the medical requirements contained in this protocol are met. The COVID-19 Medical Officer must assist the COVID-19 Officer for the team, in all medical aspects of the risk assessment and limitation processes and is also responsible for ensuring that any suspected or confirmed COVID-19 cases are handled in accordance with the correct guidelines, in compliance with the test and isolation protocols and contact tracing, also with regard to the resumption of training and the Match.

The COVID-19 medical manager must be a doctor regularly enrolled in the Register of Doctors or the competent health authority of his area and must know the emerging picture relating to the post-COVID-19 pathology. This figure may or may not coincide with that of the Organization's medical manager.

- T. **COVID-19 Operations Manager** refers to one or more persons who (together with the COVID-19 Head for the team) are responsible for implementing the instructions contained in this document (in addition to all other guidelines, recommendations and instructions relating to the COVID-19) relating to some operational aspects that are left to the discretion of the Federations, such as the choice of particular training facilities, match stadiums and team movements.
- U. **COVID-19 Team Manager** refers to the person in charge and responsible for communicating to all players and the technical staff of his Federation. The COVID-19 Officer for the team must have (a) knowledge of the operating procedures of the Federation and the participating Team and (b) (if not a healthcare professional) easy access to one or more healthcare professionals who have clinical knowledge of COVID-19;
- V. **COVID-19 Operations Manager for Stadium** refers to the person responsible for coordinating the specific COVID-19 Risk Assessment and Limitation Plan for that stadium and the planning and implementation of the COVID-19 Operational Plan for the stadium prepared by the Federation.
- It is your responsibility to communicate all information relating to the Stadium to all User Groups and to ensure that all requirements are met.
- W. **COVID-19 Red Zone Coordinator at the Stadium** refers to the person who acts as the main point of contact within the red zone set up in the Stadium and who must also be part of the testing pool of the host Federation if operating within the Zone 1 / RED ZONE.
- X. **Federation doctor.**
- Y. **MAG Medical Advisory Group in support of SNRL.**

### 3.2 APPLICABILITY

This document applies on the occasion of the next rugby sporting events with the public in attendance, (where foreseen and authorized by the competent local Authorities even with a number of spectators higher than those established by the Legislative Decree 52/2021 and 65/2021) and to all the figures involved in the organization and management of the various phases of the sporting events to be organized approximately **from the month of June 2021**; it also aims to summarize and integrate the behavioral rules to be implemented if necessary and to ensure compliance with the areas of the event is of fundamental importance to ensure the health of all those present.

The application of this Protocol is linked to the existence of structural and organizational prerequisites necessary to ensure its correct, consistent and timely implementation.

#### **Essential structural requirements are:**

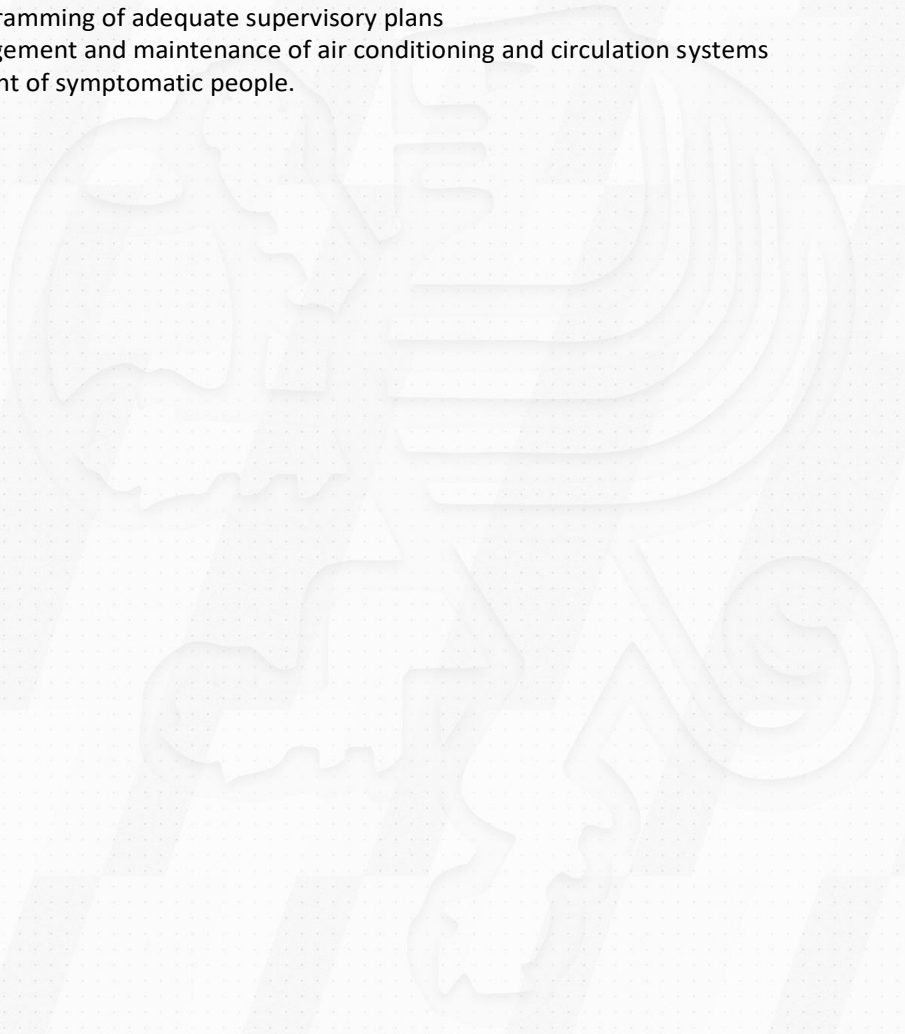

- spaces sufficiently large to be able to guarantee, according to the number of people admitted, compliance with safety distances
- ~~possibility of managing accesses for vaccinated spectators with negative swabs on an exclusive or priority basis (with remote loading or with the possibility of carrying out the test before accessing the plant) through the adoption of specific hardware and software tools for consistent and punctual application of the segregation of groups, of interpersonal distancing, of contact tracing.~~
- Sports facilities and relevant areas, adapted to the need to create different flows and routes for all users, including the principle of "bubbles"
- spaces suitable for the temporary containment of possible cases of symptomatic people within the area
- fixed and / or mobile structural divisions for interdiction of work areas or rooms
- fixed and / or mobile divisions and barriers for the protection of those present
- flow dividers and regulators for the management of obligatory and / or protected routes
- fixed and mobile measuring instruments for body temperature verification
- horizontal and vertical signs
- dispensers of sanitizing and sanitizing products
- presence of adequate PPE
- presence of adequate products for the implementation of cleaning and sanitation programs
- presence of adequate systems for air conditioning and circulation.

**Essential organizational requirements are:**

- remodeling and identification of the working groups
- implementation of the "bubbles" principle, for the separation and protection of homogeneous groups
- elimination or spatial deferral of activities that are not essential for the performance of the event
- remodeling of the methods of entry, stay and circulation within the areas of the event
- remodeling of the main and complementary spaces for carrying out the planned activities, in relation to the maximum admissible crowding and the safety distances to be guaranteed between those present
- identification and classification (level of criticality) of the areas
- training, information and training of internal personnel and personnel belonging to the contracting companies
- information to all present on the hygiene measures to be respected during their stay on the site
- planning of adequate staff paths according to the need for distancing and control
- planning of adequate differentiated routes for access, transit and exit of all authorized persons
- design and implementation of adequate procedures for the implementation of access controls
- planning and programming of adequate cleaning, sanitizing and disinfection plans
- design and programming of adequate supervisory plans
- adequate management and maintenance of air conditioning and circulation systems
- case management of symptomatic people.

## 5. DESCRIPTION OF THE ACTIVITIES

---

The sports facilities covered by this document generally consist of the following spaces:

1. **Area for carrying out sports activities and related services for athletes.**
2. **Spaces for the public (spectator seats, toilets, first aid, parking area).**
3. **Service areas Workers (car parks, offices, warehouses).**
4. **Rooms / Technical areas (heating, cooling, dehumidification, lighting).**

Without prejudice to the definition of the aforementioned areas, complementary spaces for refreshment, recreational or commercial activities can be added to promote the maximum level of well-being of users (*where provided and authorized by the local authorities of competence and in compliance with the regulatory provisions for the correct implementation of the measures anti-contagion and security in force*).

Access takes place from the entrances located on the perimeter of the facility which guarantee access and distribution of the public in the various sectors.

From a functional point of view, the stadium is structured through the identification of the following areas:

- Athletes Area
- Media Areas
- Pavilion (public stands)
- Food & Beverage areas
- **Area of merchandising** and service activities
- External parking spaces attached to the structure
- Support areas for services rendered (offices, warehouses, kitchens, etc.)
- Technical areas for stadium
- Under the grandstand

## 6. TERMS

For the purposes of this document, we mean:

- **Prefiltration areas:** areas outside the stadium, near the entrance gates, located along the perimeter of the internal area of the stadium.
- **Area of public access to the facility:** area where the possession of the Stadium admission ticket and identification document, temperature measurement, security checks are carried out.
- **Spectators' area:** areas reserved for the public which include the space reserved for spectators (seats assigned on the two stands), the support services dedicated to them (toilets, bars, refreshment points), any spaces and ancillary services (merchandising shop) and related access paths.
- **Participant:** means the person who takes part in the competition, that is: teams (athletes, coaches, team doctors, physiotherapists, accompanying persons), staff of the Federation / DSA / EPS, of the jury, of the timing staff, staff assigned to anti-doping, emergency medical and health personnel.
- **Accredited:** means the person who is part of the organization of the event or who takes part in it on a working basis, namely: media professionals (journalists, photographers, radio-TV operators, social media), organization staff, volunteers, support staff, stewards, law enforcement agencies, suppliers, guests, guests, authorities.
- **Spectator-Audience:** all people, external to the Organization and not participating in the competition, in possession of an entrance ticket to the stadium, and who attend the event.
- **Zone 1 / RED ZONE** - inside the Stadium: Group 01. Team and Match officials - RESERVED / ISOLATED Technical / Sports area, sports field for carrying out sports activities and related services (technical area, changing rooms, media area flash interview, entrances / exits) prohibited to the public.
- **Zone 2 / AMBER ZONE** - inside the Stadium: Group 02. Media-broadcaster; Group 03. Suppliers, Security Officers, Volunteers - authorized vehicle entry / exit, personnel entry / exit Group 02. and Group 03. - prohibited to the public.
- **Zone 3 / AMBER-GREEN** - inside the stadium: grandstands, media area / press grandstand, grandstand spectator area, service areas, catering and beverage, merchandising, media and broadcaster work areas (stands, press stand and control rooms).
- **Zone 4 / PARK FREE** - outside the Stadium: Parking - area that includes parking lots (PARK A, PARK B, PARK FREE).

## 7. MATCH DAY DESCRIPTION

The sports facility, represented by the rugby stadium Monigo, is located in an urban area of the city of Treviso and consists of the following spaces:

- areas for carrying out sports activities and related services for athletes,
- spaces for the public (spectator stands, toilets, first aid, parking areas),
- service areas reserved for SSD staff (reserved parking lots, offices, warehouses, etc.),
- technical areas (rooms for heating, lighting, etc.),
- spaces for dining and commercial activities (club house, restaurant, bar, refreshment points, ~~merchandising shop~~).

Public access to the stadium on the day of the match will take place from the entrances located on the perimeter of the facility facing Via Cisoletto (entrances numbered 11, 1, 2 and 3 - see floor plan - annex 10); the SSD reserves the right to use the numbered entrances 4 and 5 in Via Dei Campi Sportivi, based on the number of visitors. These entrances will allow access and distribution of the public in the different sectors of the two tiers of the stadium. The same gates will also be used for the public exit.

Inflows, both at the entrance and at the exit, from the system will occur in such a way as to avoid gatherings as much as possible and in any case requiring compliance with the minimum spacing (1 meter) and the use of a mask to protect the mouth and nose completely.

In compliance with current legal provisions, the number of spectators admitted inside the stadium, in the COVID-19 emergency period, will be within the limit of 25% of the authorized capacity, and in any case not exceeding 1000 people (Article 5, par. 1 of Legislative Decree no. 65 of 18 May 2021).

The SSD has planned the event by pre-selling entrance tickets through the website [www.ticketone.it](http://www.ticketone.it) (company that operates and manages ticketing services on behalf of Benetton Rugby); in any case, reserves the right to make the sale also at the ticket office at the stadium (always issue tickets with pre-assigned seats) if the maximum number of 1000 spectators expected is not reached in the online presale (or those possibly authorized in derogation).

The SSD will adopt for the day of the match (and for sporting events / matches in an emergency period) the operational plan showing the time slots that, in principle, will be observed for the arrivals of the TEAM / TEAM PERSONNEL and the public at the stadium (Annex 12).

## 8. HOW TO USE THE SPACES

The management of the flow of people inside the stadium is important in order to avoid any interference between the various operators (athletes / staff - referees - media - staff functional to the operation of the facility during the day of the match) and the public; it is therefore necessary to define the flows for each type of user.

Below is the identification of the areas (suggested by way of example), which can be used by the following homogeneous groups specifically distinguished, in compliance with the sound principles of prevention and protection, cornerstones of safety during the pandemic context.

Tab 1					
N.	Groups/users	Activity	Zone	Local	Gate
01	Athletes Match officials Medical / Anti-Doping Personnel Sports technical staff	Sport	Zone 1/RED ZONE	Changing rooms - playing area - press	6-8
02	Journalists / photographers TV and Media Operators	Production and Printing Workers	Zone 2/AMBER ZONE Zone 3/ABER-GREEN	Press stand - compound tv - mix zone	9-10
03	Providers Organization staff Safety FFOO	Organization and coordination	Zone 2/AMBER ZONE Zona 3/ABER-GREEN	Offices - stadium service spaces	
04	Spectators Guests Authority	Entertainment	Zone 3/ABER-GREEN Zone 4/PARK FREE	Grandstands - refreshment areas - toilets	11-1-2-3 (ev. 4-5)

The organization will make a stock of surgical masks available at the entrance of each area / zone.

### + Group 01. Group Team and Match Officials

An area totally reserved for professional athletes and their technical staff has been set up.

The area in question characterized as "Zone 1 / RED ZONE" is to be understood as a "Protected Area" with access reserved for certain categories and conditioned by the presentation of a negative result of a molecular swab, carried out within 48 hours from the first entry and every 72 hours for the stay after this, (in the case of competitions scheduled in rapid succession)

in addition to the eventual presentation of "vaccination occurred" (depending on the health and sports medical provisions in force).

Reports will be accepted only for tests performed at the facilities indicated by the Organizer, by SNRL and World Rugby or on the recommendation of the Italian Rugby Federation.

The "Zone1 / RED ZONE" area can also be extended to the hotel that will host the athletes and can be managed according to the indications of SNRL and World Rugby declined within the respective protocols, if deemed necessary, also according to particular pandemic scenarios in progress in some regions / municipalities of the host country.

Inside, a widespread control system will be active, possibly supported by the use of electronic tools, aimed at ensuring compliance with the segregation of the groups admitted to it.

The obligation to use the mask remains valid and mandatory also for athletes, in any situation with the exception of the moment of the game (from entering the playing field to exiting it).

The capacity of the various areas identified, for the exclusive use of "Zone1 / RED ZONE", will be limited, favoring a reduced stay in the area, facilitating the permanence of athletes in the open spaces.

In the event that special hospitality areas are organized and permitted for athletes (where provided and authorized by the competent local Authorities and in compliance with the regulatory provisions for the correct implementation of the anti-contagion and safety measures in force), they must be organized with pre-assigned tables and in the compliance with the guaranteed minimum spacing of 2 meters where possible.

Food and drinks will be served in compliance with the sector protocols with self-service; the food will be made available in single portions, possibly prepackaged.

The number of services will be consistent with the capacity of the various areas and a continuous cleaning service must be guaranteed.

### **+Group 02. Media - broadcaster**

This homogeneous group is of essential importance, since, especially in this historical moment in which the presence of the public at the events is prohibited / reduced, it allows with its work, the diffusion of images and multimedia contents related to the event, guaranteeing made survival.

**The same, according to the passes, will be able to move to Zone 1 / RED ZONE (if they have specific requirements for access), Zone 2 / AMBER and Zone 3 / AMBER GREEN.**

They are divided into three distinct sub-groups:

- journalists
- photographers-cameramen
- audio video technicians

Although belonging to the same category, the first two are those who actually frequent the competition area on a daily basis, as they have the task of shooting and commenting on the images and building the contents to be sent to television and / or multimedia broadcasters and to newspapers.

The technicians, on the other hand, spend most of their time in the TV Compound area, providing the necessary assistance to the first two sub-groups.

For this category, dedicated work areas are provided, such as in particular the media-press room area and the TV Compound which must be identified with the same criterion linked to the need to ensure large spaces, adequate safety distances, dedicated services and reserved routes. and unidirectional.

For this category, in addition to the specific behavioral modalities, the medical screening plan to be adopted according to the provisions of SNRL and World Rugby will be decided.

#### **Behavior towards athletes:**

- Limit contacts and interviews with athletes to a minimum.
- Always keep a distance of at least 2 meters towards the latter
- In interviews, use microphones with a long rod, with continuous sanitization of the parts that may come into contact.

**As a precaution, attachments 1, 2, 4 and 5 must be duly completed and delivered to the organizer upon entry into the sports facility.**

#### **Media center - press room**

The workstations will be limited to a maximum of 30 people (and in any case weighted according to the actual capacities / surfaces available of the individual rooms supplied to each host stadium, net of the minimum distance to be guaranteed of 1 meter outdoors and 2 meters indoors between users in presence).

The remote press conference system, already applied in the 2021 edition of the competitions organized in the reference period 1st quarter 2021, will be privileged.

Each station will be assigned exclusively to an accredited person for the entire period of the event.

Personal items can be stored in the special lockers (where provided) and removed at the end of the day, to allow a complete sanitation of the spaces.

#### **Spaces for broadcasters**

The maximum number of people to be admitted will be checked in each office at the TV Compound, depending on the size of the facilities available and the number of operators required.

The whole area will be equipped so that it can be independent from the rest of the system, with dedicated spaces for toilets and catering. Here, too, the widespread presence of disinfectant products and a surveillance service aimed at checking the correct application of the provisions of this Protocol will be ensured.

The use of television means (so-called OB van, technical means) may be guaranteed in compliance with the minimum interpersonal distance of 1 meter, with the obligation to use the mask.

The TV cabins (eg dimensions 2.00 x 1.80mt.) Can be occupied by a maximum of 1 person; the double TV booths (eg dimensions 2.00 x 3.60mt.) can be used by two people, respecting the interpersonal distance of at least 2 meters.

#### **Behavioral and hygienic measures**

The equipment of the broadcasters must be stored as indicated in the Protocol of the event

- all equipment must be cleaned and sanitized before being introduced into the system and after installation.
- if possible, no equipment or cables should be left in the Red Zone.

- the pre- and post-match interviews will be held outside in a pre-established place on the sidelines. (A suitable location should also be considered in case of rain that allows for the minimum spacing and the prevention rules announced in this document).

During these interviews, only sanitized microphone stands, and telescopic poles may be used.

- For the installation of cameras in the changing rooms, please refer to the provisions of the SNRL and / or World Rugby operating manual.
- All cameramen must be positioned at least 2 meters away from the group of players, staff and match officials.
- Only authorized personnel included in the Accreditation List for the day of the match will be able to access the issuing area - access will not be granted to guests.
- During the pre and post-game interviews, the media staff must respect the social distance of at least 2 meters from the person interviewed.

**For this category, the type and method of application of medical screening aimed at searching for possible Covid positivity is being verified.**

### **+Group 03. Suppliers, Security Officers, Volunteers.**

This homogeneous group is comparable to essential personnel in the dispute of the event, as it is responsible for the supervision, supply and assistance of the management procedures implemented by the organizer of the event.

The same, according to the passes, will be able to move to Zone 1 / RED ZONE (if they have specific requirements for access), Zone 2 / AMBER and Zone 3 / AMBER GREEN.

The group can be divided into three distinct sub-groups:

- volunteers
- providers
- medical personnel

The methods of recruiting, training and using volunteers and suppliers will respect the instructions given by the International Bodies, World Rugby and SNRL, as well as guaranteeing compliance with the safety requirements issued by the relevant Government Bodies.

For this category, however, reserved routes and methods of access, circulation, stay and exit must be identified, with special and temporal delays in the activities.

For the activities of the Police and Public Aid, a separate plan may be studied, which also considers the possibility that the latter may and / or must intervene in protected areas of the event, even at the same time as the presence of the players and their staff. Obviously in an emergency, while applying basic hygiene measures (use of a mask), privilege must be given to the implementation of the necessary intervention measures.

Those belonging to this group who will only operate in zones 2/3 (AMBER and AMBER/GREEN), will be subjected to adequate controls upon arrival at the stadium, at the entrance reserved for this purpose (body temperature control with thermoscanner at distance from dedicated personnel, equipped with the appropriate PPE), and upon registration.

The staff must also, at least 48 hours before the event, produce:

1. self-certification form, drawn up in its entirety, dated and signed (attachment 13),
2. INFORMATION ON THE PROCESSING OF PERSONAL DATA, pursuant to art. 13 GDPR 679/2016, drawn up in its entirety, dated and signed (attachment 14).

If a body temperature higher than 37.5 ° C is detected, the subject will be isolated within the room identified as COVID + (see plan). In the case of isolation in the room, the person must be immediately equipped, if not already, with a surgical mask.

The person (s) identified must / will have to return immediately to their home where they will be followed by the competent people of the ASL, in compliance with the guidelines of the Ministry of Health.

## Behaviors to adopt

Constant training and information on the correct behavior to be adopted during the event.

The activities are organized in small working groups, kept uniform throughout the duration of the event.

To the volunteers and staff involved in the event, (where provided and authorized by the competent local Authorities and in compliance with the regulatory provisions for the correct implementation of the anti-contagion and safety measures in force), the Organizing Committee must offer the attendance of a training course and preliminary training in the field at the start of activities, on the risk of contagion from Covid-19 and the related prevention and protection measures within the Protocol of the event. However, where applicable, the recommendations for companies and workers contained in the protocol between the Government, unions and companies signed on March 14 and integrated on April 24, 2020 and subsequent amendments and the provisions of Legislative Decree 81/08 and subsequent amendments and additions, are reserved

## +Group 04. Spectators and Guests

This user group is reserved for guests and spectators who, it is hoped, will be able to participate in the event.

**They are allowed to move only in Zone 3 / AMBER GREEN and Zone 4 / PARK.**

A specific accreditation procedure is envisaged for this category, which provides for the presentation of a self-certification including the outcome of the Covid-19 negativity test performed at least 48 hours before the event, with the addition of the certification of the occurrence. vaccination, (only if given exhaustively) and / or certification of successful administration of the first vaccine dose issued at least more than 15 days. before the match / event (art.14, co. 2 of D.L. 18 May 2021 n.65).

The admission tickets will all be nominal, with pre-assigned places and will not be transferable.

The ability to allow a title change within 48 hours from the date of access may be assessed by the organizer.

## Accreditation and access

All guests must have nominal access to the dedicated area of the sports facility, avoiding providing generic passes / tickets for staff / guests / spectators.

Visitor access will take place with entry, transit, exit procedures, predefined and differentiated methods, routes and timing, in order to reduce the opportunities for contact.

The seats will all be assigned in advance to the various guests / sponsors / spectators.

Contacts with other homogeneous groups present at the event are absolutely forbidden, except for reasons of health, safety and / or public safety.

To facilitate the accreditation phases and the consequent issue of the access ticket to the event, the organizer of the event may present and / or upload / store at its headquarters and / or on a specific computer system (e.g. a reference App) the following documentation:

- a self-declaration certifying the state of health (absence of symptoms attributable to Covid-19)
- an antigen or molecular test has been carried out with a negative result no later than 48 hours prior to access and any vaccination has taken place, for those who have undergone exhaustive treatment (complete vaccination procedure with boosters).

## 9. ENTRANCE GATES

Following the assessments related to the criticality of gathering, the public, in correspondence with the pre-filtering area, will be managed in such a way as to ensure the usability of the structure in compliance with the indications of social distancing between spectators and ticketing control staff.

Adequate prevention measures will be adopted between the spectator and the steward staff by providing adequate protective PPE to ensure the correct verification of the ticket and the identity document without contact between them.

Access to all entrance gates will be modulated so as to respect the safety distance of at least 1 meter between each spectator and between the operator and the public.

The stages of access to the Stadium and checks to which the public will be subjected before entering the grandstand where they have the assigned seat are shown.

- 1. ENTRANCES** - Access from the perimeter facing the street level through entrance gates (nos. 11-1-2-3, possibly nos. 4 and 5), where:
  - a) measurement of fever (which must be below  $37.5^{\circ}\text{C}$ ),
  - b) if condition a) is verified, verification of the admission ticket (nominative ticket with pre-assigned seat), identification document, self-certification / certification bearing the outcome of the Covid-19 negativity test performed at least 48 hours before 'event, or a copy of the certification of vaccination, or a copy of the certification attesting to recovery from Covid-19 in a period not earlier than 6 (six) months from the date of the event,
  - c) verification of the presence and correct use of PPE (face mask at least of a surgical type).

The Public, after the entry checks,

- will be directed by the stewards towards the grandstand where the assigned seat is located,
- must show the access ticket (ticket) to be directed to the assigned seat that he must keep, without any possibility of change during the entire time of the match.

**Inside the stadium, PPE must always be worn.**

The accesses are structured as follows:

- **Entry / Exit nos. 11 and 1 - WEST STAND**
- **Entry / Exit nos. 2 and 3 (possibly 4 and 5) - EAST STAND**

Any subjects identified with  $\text{TC} > 37.5^{\circ}\text{C}$ , will be repeated a second measurement and, should the second measurement confirm  $\text{TC} > 37.5^{\circ}\text{C}$ , will be notified to return immediately to their home; the guidelines of the Ministry of Health will be followed with reporting of the person to the competent ASL.

In relation to the number of expected admissions and the expected public, a number of admissions must be identified so structured as to adequately perform the task, in terms of interpersonal distancing and waiting times, as detailed in the scheme proposed purely by way of example.

Example diagram

Scheme describing the tasks in relation to the positioning of the entrance control officers and movement of the public inside the stadium on the day of the match.

Example table

POSITIONING IN ZONES	TASKS
Zone 1 / RED ZONE	<ul style="list-style-type: none"><li>✓ Manage the queue of users who access the external area</li><li>✓ raise awareness of the social distancing among the people in line waiting for the check of the access ticket and recognition of the personal identification document - Positioning 1</li><li>Forbid entry to users not in possession of PPE</li><li>✓ Regulate the passage of the team, through the Metal Detector portal or manual control devices and procedures</li><li>✓ The temperature of each user can be measured, depending on the regulatory provisions that will follow, and if a body temperature &gt; 37.5 ° C is found, prohibit entry to the facility. The temperature measurement will be carried out using suitable instrumentation, allowing a faster process for queuing management</li><li>✓ Prohibit entry to Customers who do not have PPE</li><li>✓ Manage the interconnection between users who have to queue</li><li>✓ go through the control portals and go to the next step</li><li>✓ Verify acquisition of Covid Medical Officer documents (swab results)</li></ul>
Zone 2/AMBER ZONE	<ul style="list-style-type: none"><li>✓ Manage any queue of users entering the various sectors to reach their workstation ensuring the distance between people</li><li>✓ Manage the indications on the workstation to be reached by the user in order to prevent disorderly distribution in the sessions</li><li>✓ Get in touch with Positioning 2 to manage flows in the case of queue creation</li></ul>
Zone 3/AMBER GREEN	<p>Manage the queue of users who access the external area</p> <ul style="list-style-type: none"><li>✓ raise awareness of the social distancing among the people in line waiting for the check of the access ticket and recognition of the personal identification document - Positioning 1</li><li>✓ Prohibit entry to users not in possession of PPE</li><li>✓ Get in touch with Positioning 2 to manage queue flows by temporarily blocking the influx of spectators from the perimeter outside the system</li><li>✓ verify compliance with the established flows and manage any queuing</li><li>✓ Manage any queue of users during the security control operation in the reserved area</li></ul> <p>Regulate the passage of the spectator through the Metal Detector portal or manual control devices and procedures</p> <ul style="list-style-type: none"><li>✓ The temperature of each user can be measured, depending on the regulatory provisions that will follow, and if a body temperature &gt; 37.5 ° C is found, prohibit entry to the facility. The temperature measurement will be carried out using suitable instrumentation, allowing a faster process for queuing management</li><li>✓ Prohibit entry to Customers who do not have PPE</li><li>✓ Manage the interconnection between users who have to queue to cross the control portals and move on to the next step</li><li>✓ Accept that step 3 of accessing the maximum-security area and crossing the turnstiles is carefully managed without creating queues. Otherwise, temporarily slow down the influx of users</li><li>✓ Get in communication with Positioning 1 to manage flows by temporarily blocking the flow from the external entrance gate</li></ul> <p>The management of TV operators, journalists and photographers is regulated through delayed time slots upon entry by them and by facilitated routes to avoid interaction with people.</p> <p>In all cases, manage any queue and respect the social distancing.</p> <ul style="list-style-type: none"><li>✓ Measure the temperature of the Media and in case a temperature is found</li></ul> <p>body temperature &gt; 37.5 ° C prohibit entry to the facility or wait in a dedicated room and then re-check the body temperature</p> <ul style="list-style-type: none"><li>✓ Media must be provided with appropriate PPE</li><li>✓ facilitate the entry of any staff with disabilities</li><li>✓ You can use the self-declaration form provided for by the Protocol in which the user will declare that in the last 14 days, he has not had contact with subjects who tested positive for COVID-19 or comes from areas at risk according to the indications of the WHO; PROVIDE EARLY SENDING</li></ul>

## 10. SPECTATORS AREA AND ANNEXED SERVICES

The sporting event involves the participation of the public / spectator in a static type of configuration as the user will view the event in the stands, in the assigned seating places.

The public will be distributed on the two stands (EAST and WEST) on the assigned seats. The assigned places have been defined considering the distance between subject and subject of at least one meter (mouth / mouth spacing), both laterally and frontally / diagonally. For this reason, the assigned seats have been arranged in a "checkerboard" pattern, always guaranteeing an empty space next to the seat occupied. **The distance will be maintained for spectators who do not normally live together, and for the staff.**

In addition to the above, areas and rooms reserved for televisions (DAZN) and journalists are provided in the highest part of the WEST grandstand (central grandstand sector).

The spectators will be distributed, in the specific sectors, according to the following capacities:

Stadium type	Maximum occupancy Grandstand	Reduced capacity Grandstand	Capacity notwithstanding the grandstand	% reduction	Number of entry / exit gates	Persons / gate	Entry times (min)
<b>STAGE</b>	2516 (WEST)	629	(1258)	25%	2	315	80 c.a.
<b>MONIGO</b>	2484 (EST)	621	(1242)	25%	2	311	80 c.a.

\* The value of one person / minute is assumed to be conservative. In reality, it has been observed that transit times are approximately 3-4 people per minute

In order to ensure the management of flows and the avoidance of overcrowding at the various levels and areas, the Stewards will proceed to:

- regulate the flow of users in the points where the methods of purchasing / using a service are slower (bars, refreshment points),
- regulate the flow of users near the toilets.

Within Zone 3 / AMBER GREEN, the public is still required to limit their movements except to go to the toilets or to move to food & beverage areas.

Under no circumstances will it be possible / admitted to the public to stand in any space of the stadium. Each spectator must always return as soon as possible to their assigned seat by not occupying other free seats that the Company is obliged to keep as such to ensure the legally required distancing.

There are no commercial areas.

### Athletes' hospitality areas

The capacity of the areas identified for this purpose, for the exclusive use of people in RED ZONE (Zone 1) will be limited; a reduced stay in the area / areas will be favored, facilitating the permanence of athletes in the open spaces.

The hospitality areas will be organized with tables pre-assigned to the teams.

Food and drinks will be served by personnel equipped with suitable PPE; there will be no form of self-service. The food will be served in single portions, possibly prepackaged.

### Catering tents (where present, reserved for accredited guests only)

The capacities are limited to ensure interpersonal distancing of one meter.

Unidirectional access routes and internal flows will be set up to avoid crossings between people.

Tables and seats will be organized maintaining interpersonal distance (1 meter backrest / chair backrest - 2 meters table edge / table edge).

The seats will be pre-assigned, and each table will be assigned to homogeneous working groups (athletes, staff, media, etc.).

The possibility of having meals will be allowed only at the table

Continuous sanitation of the tables and chairs will be guaranteed, through cleaning carried out with suitable products.

Any tablecloths and consumables will be disposable only.

## 11. PARKING

The public will have the opportunity to park in the PARKs located on Via Olimpia and Via Cisoletto (see attached map); there will be stewards who will help the spectator to park the car in the planned parking areas.

## 12. FRAMEWORK OF THE MATCH DAY IN THE CONTEXT OF THE PROTOCOLS / GUIDELINES

The Prime Ministerial Decree up to now followed one another (most recently that of March 2, 2021), have always indicated that in order to reopen the production activities as well as those of entertainment, catering, sales, etc. the anti-contagion measures contained in the protocols and guidelines adopted pursuant to art. 1, paragraph 14 of the D.L. 33/2020.

The rugby match, if analyzed from the point of view of anti-contagion measures, by linking the specific activities to those contained in the annexes to the Prime Minister's Decree, can be classified as follows.

ACTIVITY	REGULATIONS	ACTIVITY	REGULATIONS
Sport	Art.18 DPCM of 02.03.2021 and subsequent amendments Art. 5 of the D.L. 52/2021 Art. 5 of Legislative Decree 65/2021 Pro Rugby Championship DAC (Guinness PRO14 Organizer) FIR PROTOCOL FOR THE ORGANIZATION OF TRAINING & OF THE NATIONAL COMPETITIVE ACTIVITY FIR 27.05.2021 FIR REGULATION PROTOCOL FOR RUGBY SPORTS COMPETITIONS OPEN TO THE PUBLIC GUIDELINES FOR THE ORGANIZATION OF EVENTS AND SPORTING COMPETITIONS OF THE PRESIDENCY OF THE COUNCIL OF MINISTERS - SPORTS DEPARTMENT	Public area	Art. 5 of Legislative Decree 52/2021 Art. 5 of Legislative Decree 65/2021 FIR PROTOCOL FOR THE ORGANIZATION OF TRAINING & OF THE NATIONAL COMPETITIVE ACTIVITY FIR 27.05.2021 FIR REGULATION PROTOCOL FOR RUGBY SPORTS COMPETITIONS OPEN TO THE PUBLIC GUIDELINES FOR THE ORGANIZATION OF EVENTS AND SPORTING COMPETITIONS OF THE PRESIDENCY OF THE COUNCIL OF MINISTERS - SPORTS DEPARTMENT

### **13. ORGANIZATIONAL AND REGULATORY MEASURES**

The technical and organizational measures taken into consideration for the day of the match are described below, in order to avoid and contain a possible spread of COVID-19.

#### **13.1 ORGANIZATIONAL MEASURES DICTED BY THE CLUB**

The SSD, for the management and organization of matches in the closed-door configuration, has already adopted its own protocol (Covid-19 prevention plan, last revision of 26.04.2021), aimed at reducing the risk from Covid19.

With reference to the forecasts referred to in the aforementioned Plan, the anti-contagion measures, put together, are implemented through:

<b>MEASURES IMPLEMENTED</b>	
Adequate Information / Training	Each Employer will take care of the training of their staff, following the protocols dictated by the SSD. The public will be informed at the time of purchase of the ticket and through specific signs and audio messages during the sporting event.
Anti-Contagion Security Protocol	All external suppliers (Catering, Fitters, Sponsors, etc.) must have a specific protocol for their activities based on the anti-Covid rules defined by the SSD.
Maintaining the distance	Within the area, compliance with interpersonal safety distances of at least 1 meter, <b>raised to 2 meters within the red zone</b> , is mandatory for the entire time of stay.
Temperature Measurement	Each supplier, sponsor and media will be subjected to temperature checks at their dedicated entrances.
Hand sanitizing gel	Each access gate will be equipped with a dispenser for hand sanitation.
Mask	<b>It is mandatory, in all areas, to wear a mask with the exception of sports areas (field / players).</b>
Disposable gloves	The use of gloves is mandatory for all activities related to the catering service and healthcare personnel.
Disposable apron (disposable)	The use of an apron is mandatory for all activities related to the catering service.

<b>MEASURES IMPLEMENTED</b>	
Maintenance of the access names list for 14 days.	Keep the attendance lists of all activities for 14 days in order to be able to trace the presence in the event of an ascertained COVID.
Cleaning and disinfection	Frequent cleaning of the spaces will be guaranteed as described in the Stadium Sanitation Protocol.
Disinfection	All areas used by the public will be sanitized before the facility opens to the public.
Exchange of air in closed environments	An adequate air exchange will be guaranteed as required by the Ministerial and Regional guidelines.
Ground signage	To ensure social distancing in free movement areas, horizontal / vertical signs have been set up near commercial activities such as food & beverage, <del>merchandising area</del> and access to toilets.
Remodeling of spaces	For all spaces such as the Hospitality, the stands, Media areas and all the common areas, the spaces will be remodeled in order to maximize the number of attendees, always taking into account the distance of 1m between all the users of the spaces.

These measures will be applied in all areas that make up the context of the individual competition, coordinating them with employers, such as coordinators of individual company committees, of all subjects such as Suppliers, Media, Sponsors, Guests / Guests, Sports Groups / Athletes, etc. involved in the single race.

### 13.2 ESTABLISHMENT OF THE COMMITTEE FOR THE APPLICATION AND VERIFICATION OF THE RULES AND THE REGULATORY PROTOCOL

The SSD has set up a Committee for the application and verification of the rules of the regulatory protocol (as required by the shared protocol for the regulation of measures to combat and contain the spread of the Covid-19 virus in the workplace - annex 12 of DPCM 07 / 08/2020 and subsequent amendments).

To the Committee, set up by the Employer of the SSD the Prevention and Protection Service Manager, the competent Doctor and other management figures belonging to an already established "task force" participate (attachment 11).

### 13.3 RESTAURANT AREAS

Spectators can take advantage of the food & beverage type catering services **before and during the sporting event.**

**In these areas, the public will have the opportunity to order food and drinks, respecting the restricted spaces. These areas will be equipped only for take-away and consumption will only be possible sitting on the seat assigned on the grandstand.**

**During the course of the game, spectators are obliged to constantly use PPE.**

**To reduce the queues for access to the bar / refreshment points, the Organization will be able to provide a delivery service at the stands.**

Hand sanitation points will be provided at the catering premises with special hydro-alcoholic disinfectant detergents.

All staff employed in the management of the food & beverage service will necessarily wear personal protective equipment (surgical mask) and will minimize contact with the user.

The spectator is obliged to always wear a protective mask once he leaves his assigned seat and to sanitize his hands whenever necessary.

The SSD will guarantee periodic cleaning and sanitization as required by the Ministerial guidelines.

Below is an exemplary scheme of crowding and movement of those present within areas that could be dedicated to this activity, according to the relevant regulatory provisions.

### 13.4 TOILET SERVICES

In relation to the capacity of the system, toilets are provided for the different types of user's present adults, children, staff and the disabled.

**At each area/zone are an adequate number of toilets with running water and cleaning products are available.**

**All the services and equipment present there will be constantly sanitized by dedicated staff.**

Le persone all'interno dei servizi dovranno utilizzare le dotazioni (WC e lavabi) che risultano fruibili secondo la segnaletica presente; è stato inibito l'uso di WC (soprattutto orinatoi a parete, che non permettono il rispetto del distanziamento).

### **13.5 LIFTS AND STAIRWELLS**

The public is required to use the stairs to reach the various sectors and assigned seats, in compliance with the signs (horizontal / vertical) present and following the instructions of the stewards present.

The use of the lifts is reserved exclusively for people with disabilities (possibly accompanied), elderly people and pregnant women.

### **13.6 ROOM FOR TEMPORARY HOSTING "POSITIVE ASSUMPTIONS"**

An environment has been identified within the Stadium intended to temporarily isolate, pending the "evaluation", personnel whose body temperature is greater than or equal to 37.5 ° C

The SSD has defined the procedure referred to in the next point to carry out the "evaluation" of the subject and possibly manage the transfer to the site suitable for carrying out all the necessary health checks.

### **13.7 MANAGEMENT OF SYMPTOMATIC CASES**

In the event that a person, be it an employee, a contractor company employee, a visitor, a spectator, develops fever and symptoms related to Covid-19, during his stay within the premises and areas of the event, must immediately notify the Personnel Office or his direct contact person who must immediately inform the Covid Manager appointed for the event.

In this circumstance, it will immediately proceed to its isolation in a room dedicated to this purpose, identified and ventilated, ensuring in any case such methods as to guarantee the confidentiality and dignity of the same, to which the actions to be carried out in compliance with the provisions will be specified. of the Health Authority for cases of this kind or reporting to the attending physician and / or to the relevant offices of the competent health authority, as well as to the emergency numbers for COVID-19 provided by the Region or the Ministry of Health; in this case, the medical plan structured in collaboration with the local health authorities will be activated, which also provides for biocontainment procedures.

In the event that a person who participated in various capacities in the event and was subsequently found positive to COVID-19, the Organizer will collaborate with the health authorities to define any "close contacts", in order to allow the authorities to apply the necessary and appropriate quarantine measures.

During the investigation period, the Organizer may ask, as a precaution, on the indication of the Health Authority, any possible close contacts to refrain from attending the areas of the event, for a period to be specified later, but in any case, not less than 14 days.

For any contact tracing activities, the tracking systems made available by the software that the Organizer will use for the issuance of accreditations or similar activities that favor a quick and reliable identification of the attendance involved on the day of the event may be very useful.

### **13.8 MEASURES FOR THE INFORMATION OF STAFF AND THE PUBLIC**

The Committee for the application and verification of the rules of this Protocol and the Covid-19 Prevention Plan will share the contents of this document with the control officers on duty on the day of the match.

The organizer of the event will provide all participants with specific information about the provisions of the competent authorities on the subject of combating the virus and the main procedures provided for in this Protocol, in addition to the usual guidance within the event.

In addition, special signs will be posted in the areas and premises of the event, and information manuals, operating instructions, summary brochures will be distributed.

Frequent voice messages and video instructions will also be transmitted through the LED screens and / or the audio system of music present in the areas even during matches and in intervals.

The Organization will also provide adequate information to all interested parties, on the basis of their duties and work contexts, with specific reference to the set of measures adopted which the staff must comply with, in particular on the correct use of personal protective equipment, health and medical devices, distributed in order to help prevent any possible form of spread of the virus and on compliance with hygiene measures that favor adequate action to combat the virus.

In this regard, the Organizer has already given prior information through brochures and notices to all those present in the stadium on the day of the match.

### 13.9 POSTERS

The SSD has posted inside the Stadium communications addressed to the Public in order to reduce the risk of contagion and spread of the virus.

These are posters dedicated to recalling:

- the obligation to comply with the rules of distancing and maintaining an interpersonal distance of at least 1 m (those belonging to the same family unit are excluded from this obligation),
- the obligation to use PPE (masks),
- the obligation to use sanitizing gel dispensers,
- the obligation to respect the signs indicating the routes to follow for access to the grandstands, the entrance and exit gates,
- the obligation to follow all the general indications regarding the behaviors to be kept inside the stadium in order to contain the infection from Covid-19.

Attached to the document are some examples of signs that the SSD exhibited inside / outside the Stadium.

This specific signage for Covid-19 is joined by the technical signage already in use to indicate escape routes, prohibitions, dangers, prevention and fire prevention measures.

### 13.10 GENERAL HYGIENIC PRECAUTIONS THAT WILL BE PROVIDED

The Organization has established procedures that encourage the adoption, by all those present within the event area, of appropriate hygienic precautions, such as, mainly, frequent washing of hands with adequate products, the containment of coughing or sneezing, the use and proper disposal of suitable protective equipment such as masks and gloves.

In addition to all the foregoing, also based on current regulatory provisions, all those present were called to comply with the following behavioral methods to be observed:

- it is mandatory that the people present in the workplace take all the necessary hygienic precautions to prevent any sources of contagion
- Frequent hand washing with soap and water is recommended (also using detergents made available in special dispensers);
- avoid close contact with people suffering from acute respiratory infections
- avoid hugs and handshakes
- maintain an interpersonal distance of at least 1 meter in social contacts
- practice respiratory hygiene (sneeze and cough into a handkerchief, avoiding hand contact with respiratory secretions);
- avoid the mixed use of bottles and glasses
- do not touch your eyes, nose and mouth with your hands
- clean the work surfaces with chlorine or alcohol-based disinfectants before, during and after use during working hours
- it is strongly recommended in all indoor areas where there are social contacts, the use of a mask, as an additional measure to other protective measures; In this regard, the Organization must provide for the permanent obligation to use a mask both in the internal and external areas.

Such behaviors will be encouraged by posting illustrations or information leaflets in the toilets and in the main premises and areas of the site and by distributing this Protocol to all interested parties.

The hand cleaners mentioned above will be accessible to all those present also thanks to specific dispensers marked and placed as well as in the toilets, in easily identifiable points, such as entrances and exits of the offices, lobbies, corridors, galleries, passage areas.

#### Other hygiene measures

In this regard, the provisions of the individual World Rugby or SNRL protocols, or other sector organization, will be implemented, prepared for the holding of rugby matches in the Covid-19 emergency, which are an integral part of this protocol.

By way of non-exhaustive example, some of the hygiene measures envisaged are reported

- all the people involved on the game day will be provided with clarifications regarding the basic hygiene measures to be adopted with reference to the guidelines of the medical experts (hand disinfectant, hygiene for coughs and sneezing, safety distance, etc.);
- the length of stay in the changing rooms and in the workplaces inside the Stadium before and after the match will be reduced to a minimum, as provided and indicated by the SNRL and World Rugby protocols.
- the management of the entrance to the facility of the players and the related technical staff and / or other indispensable personnel will be entrusted to security personnel, under the supervision and coordination of the Committee for the revision of the Covid-19 documentation

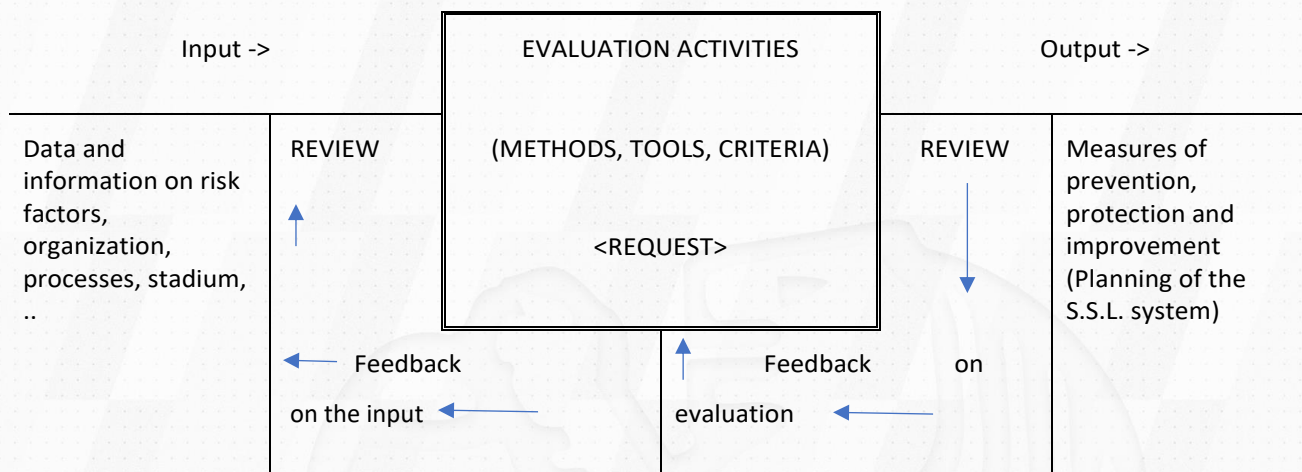

- the personnel assigned to access control at the entrances of the Stadium will ask the people admitted inside to declare their state of health and measure their body temperature
- hand disinfectant products will be placed at the entrance or inside each room
- before entering sensitive areas, such as changing rooms, infirmaries, physiotherapy rooms, the disinfection and sanitization of the premises and surfaces concerned will be carried out and the relevant certificate will be acquired certifying their correct, consistent and timely execution
- the use of personalized bottles will be encouraged, in order to avoid sharing them
- the common areas (changing room, shower) will be used in small groups and with guarantee of adequate spacing; the changing rooms available fully satisfy this need
- for the use of fitness machines, appropriate disinfection of the contact parts will be guaranteed before and after use
- the medical staff in charge of managing the infirmaries must observe all the necessary hygiene measures and use suitable PPE, such as FFP2 or higher-level filtering facepieces, disposable gowns and gloves, protective goggles visors
- the beds for the players' massages and treatments for therapeutic purposes will be placed at an adequate distance from each other
- medical equipment such as ultrasound, shock wave therapy, etc. they will be used only with adequate disinfection before and after use
- the people in contact with the players must observe in a particularly scrupulous way the hygiene and protection measures
- the conditions of maximum isolation from third parties not belonging to their own group will be guaranteed for the players and their technical staff
- the protection of the mouth and nose will generally be mandatory after entering the stadium and in all areas
- hand disinfection will be encouraged at all levels and in all areas and premises
- the holding of meetings between the parties involved in organizational activities, as well as in television production, will be subject to current hygiene regulations, especially those on the minimum distance. Communications must take place mainly via e-mail or with methods of communication deriving from television transmission technology
- the performance of breaks must not generate crowds.

## 14. RISK ASSESSMENT

Risk assessment is a comprehensive and documented process that concerns all risks to the health and safety of workers present within the organization in which they work, aimed at identifying adequate prevention and protection measures and to draw up the program of measures to ensure the improvement of health and safety levels over time. (art. 2, c. 1 l. q) of the d. lgs. 81/2008).

The risk is "the probability of reaching the potential level of damage in the conditions of use or exposure to a specific factor or agent or to their combination" (Article 2, paragraph s) of Legislative Decree no. lgs. 81/2008); consequently, risk assessment involves a certain degree of subjectivity; this subjectivity can be reduced if the evaluation process includes systematic REVIEW activities. The review is an activity carried out to ascertain the suitability, adequacy, effectiveness and efficiency of the evaluation process or its individual parts to achieve the established objectives; in order for the evaluation process to achieve the objective of objectivity, the review must:

- be multidisciplinary, involving people with different experiences and types of professionalism (eg: the employer, the prevention and protection service, the competent doctor, the technical staff and the managers of the various organizational entities, ...);
- involve, where possible, subjects independent from the study and processing phase previously carried out (eg: external experts);
- possibly involve subjects with different interests with respect to the object: for this it is essential to consult the workers' representatives for safety and, where possible, workers
- provide, where possible, a sample recheck on the information and data already collected.

A first phase of review takes place at the time of approval of the document; subsequently, the review is carried out during the periodic prevention and protection meeting, whenever it is necessary to update the risk assessment.

The criteria on the basis of which the risk assessment process is developed can be summarized as follows:

- the general protection measures referred to in art. 15 of Legislative Decree 81/2008, which are translated into the technical and management standards in force and generally applied
- the current legislation on prevention, hygiene and safety at work for the specific categories of risks, which constitutes a mandatory standard
- the "technical standards", "good practices" and "guidelines" pursuant to art. 2 of d. lgs. 81/2008, which can provide more advanced standards, applicable from time to time in relation to the continuous evolution of technical and scientific knowledge.

To the aforementioned forecasts, all those issued in the context of the Pandemic relating to the SARS nCOV-2 virus have been added, in order to limit its spread and possible contagion in the workplace.

In addition, the one proposed by INAIL in the technical document of 23.04.2020 and subsequent amendments was introduced as a method for assessing the specific risk for the disease derived from the aforementioned virus, identified as COVID-19. which suggests evaluation methods that take into account three main variables to be considered in the context of the work performed:

- **Exposure:** the probability of coming into contact with sources of contagion in carrying out specific work activities
- **Proximity:** the intrinsic characteristics of work that do not allow sufficient social distancing for part of the working time or for almost all of it
- **Aggregation:** the type of work that involves contact with other subjects in addition to the company's workers.

These risk profiles can assume different values between identical categories of exposed subjects analyzed. In fact, the SSD risk depends not only on the type of target to which it refers, but also and above all on the activity carried out by the latter during the various phases that distinguish its "participation" in the event.

The risk associated with those present could in fact take on different values, for example, between the access phase and that of free circulation within the avenues of the stadium.

However, it is believed that the values identified for each category analyzed, which for simplicity of reading are reported as summaries of all the phases that distinguish the degree of participation in the manifestation of the latter, are widely representative of the combined risk profile that characterizes each of the they.

#### 14.1 INTEGRATED RISK ASSESSMENT METHOD

A risk matrix is illustrated below based on the comparison of the scoring attributable to each production sector for the first two variables, with the related scales1:

##### Exposure

0 = low probability (eg agricultural worker);

1 = low-medium probability

2 = average probability

3 = medium-high probability

4 = high probability (eg. health worker).

##### Proximity

0 = work done alone almost all of the time

1 = work with others but not in proximity (eg private office);

2 = work with others in shared spaces but with adequate distance (eg shared office);

3 = work that involves shared tasks in proximity to others for a non-predominant part of the time (eg assembly line);

4 = work carried out in close proximity to others most of the time (eg dental office).

The score resulting from this combination is corrected by a factor that takes into account the third scale:

##### Aggregation

1.00 = limited or no third-party presence (eg manufacturing sectors, industry, offices not open to the public);

1.15 (+ 15%) = intrinsic presence of third parties but organizationally controllable (eg retail trade, personal services, offices open to the public, bars, restaurants);

1.30 (+ 30%) = aggregations controllable with procedures (eg health, schools, prisons, armed forces, public transport);

1.50 (+ 50%) = intrinsic aggregations controllable with very limited procedures (eg shows, mass events).

The final result determines the attribution of the risk level with relative color code for each production sector within the following matrix.

Risk matrix: green = low; yellow = medium-low; orange = medium-high; red = high

The assessment is made systematically using methods, criteria and tools suitable for each risk factor to:

1. determine the risk profile for health and safety in the workplace that affects each of the homogeneous groups of workers into which all the workers have been previously divided, to define the prevention and protection measures to be implemented, including the individual protection

2. draw up a ranking of priorities for the improvement program relating to the various risk factors identified and the related residual risks, in relation to the extent of these risks.

The risk assessment must be immediately revised in the event of significant changes in the production process or work organization for the purposes of workers' health and safety, or in relation to the degree of evolution of technology, prevention or protection or following significant accidents. or when the results of health surveillance highlight the need.

Following this revision, the prevention measures must be updated, and the risk assessment document must be revised.

#### **14.2 METHODS, TOOLS AND CRITERIA FOR RISK ASSESSMENT**

On the basis of what has been described, it was possible to define the homogeneous activities, that is to say a group of people who carry out the same or similar activities and tasks and who are exposed to the same risks COVID-19).

For each of the aforementioned homogeneous groups, for the purposes of risk assessment, the following were identified:

- the number of members of the various homogeneous groups
- the workplaces frequented;
- the equipment, systems, equipment used
- the crowding index of the room in which they carry out their business
- exposure to risk in terms of possible contact with other workers
- the distance / possible contact with other people who share the same work areas and premises
- basic tasks / operations / work phases
- work times and organization;
- the aggregation index that characterizes their work and that is the possibility of coming into contact with other subjects in addition to the company's workers

The risk analysis and the identification of the consequent prevention and protection measures concerned all the possible variables related to its business in the long term.

The variables of Exposure, Proximity, Aggregation were therefore considered on direct and indirect duties and tasks extended to any foreseeable circumstance or already determined within the assessment of company risks.

Therefore, we did not stop at the evaluation by category or by Ateco Code, but as for the evaluation of all other company risks, we proceeded with a detailed, peculiar and specific analysis of the activity carried out by workers within the company context. in which they operate. Then where necessary, the result of this assessment was expressed within the homogeneous group, but with a specific reference to the individual task or task analyzed. Where the results of these assessments have led to the achievement of identical values, a single overall result is reported.

The prevention and protection measures that arise from the analysis and assessment of risks consist of:

- training-information-training on specific risk for workers
- remodeling of entry procedures and restrictions on access to the company
- remodeling of the working groups according to the need to respect interpersonal safety distances between those present and the crowding limits of areas and premises
- development of procedures that provide for access controls
- development of specific cleaning, disinfection and sanitizing procedures for all premises and work areas
- indication on the use of collective and individual protective devices
- development of emergency and first aid procedures
- organization of health surveillance and protection of fragile workers
- punctual checks and verifications;
- participatory planning of the prevention and protection measures to be applied.

#### **14.3 APPLICATION OF THE INTEGRATED ASSESSMENT**

The above criteria were applied to the evaluation of the following main activities that will distinguish the phases of the event:

- those of the employees of the various Offices of the organization of the event.
- those of restaurant staff;
- those of operators and workers
- those of the suppliers of goods
- those of the Media operators.

They can be considered as homogeneous risk areas, with more or less identical characteristics in terms of the type and intended use of the premises, furnishings, equipment, location of workstations and for the use of services, type of activity carried out proximity to exposure and relative aggregation.

## 14.4 EVALUATION BY INDIVIDUAL ACTIVITIES - ORGANIZATION STAFF

COD. HOMOGENEOUS GROUP	ACTIVITY	RISK FACTORS DESCRIPTION	PREVENTION AND PROTECTION MEASURES FOR THE ELIMINATION OR REDUCTION OF RISK TO ACCEPTABLE LEVELS
1	Administrative and executive offices, Event organization	Contact with other people present in the office Possible contact with third parties Use of common areas and rooms, such as toilets; refreshment areas Use of common equipment, such as printers photocopiers; handhelds; touch screen;	Differentiated entrances routes entry exit Restrictions on unauthorized access Access controls (self-certification, use of PPE body temperature) Remodeling of work groups to the bare minimum and according to the space available Remodeling of workspaces and interpersonal distancing within the offices and / or application of protective barriers  Use of appropriate PPE such as surgical masks or higher filtering  level, availability of disposable gloves and disinfectant products of not less than intermediate level Periodic cleaning, disinfection and sanitization of workplaces Segregation and / or quota for common areas Limitations in moving within the areas and premises of the event of all those present Risk training and information Limitation to the maximum level applicable in the sharing of work equipment such as keyboards, mice, printers, touch screens and the like and / or disinfection at each change of use Work procedures involving interpersonal distancing

## 14.4.1 EVALUATION FOR INDIVIDUAL ACTIVITIES - RESTAURANT AND COMMERCIAL ACTIVITIES WORKERS

COD. HOMOGENEOUS GROUP	ACTIVITY	RISK FACTORS DESCRIPTION	PREVENTION AND PROTECTION MEASURES FOR THE ELIMINATION OR REDUCTION OF RISK TO ACCEPTABLE LEVELS
2	Catering activity staff	Contact with other employees of your business Possible contact with third parties (suppliers, maintainers, organization office) Contact with third parties Use of common areas and rooms, such as toilets Use of common equipment, those typical of one's business	Staggered entrances and differentiated entry and exit routes Restrictions on unauthorized access Access controls (self-certification, use of PPE body temperature) Remodeling of work groups to the bare minimum and according to the space available Remodeling of workspaces and interpersonal distancing within the workplace and / or application of protective barriers Use of appropriate PPE such as surgical masks or higher filtering level, availability of disposable gloves and disinfectant products of not less than intermediate level Periodic cleaning, disinfection and sanitization of work environments Segregation and / or quota for common areas Limitations in the movement within the workplace of all those present Risk training and information Limitation to the maximum level applicable in the sharing of common work equipment and / or disinfection at each change of use Interpersonal distancing in carrying out one's activities

## 14.4.2 EVALUATION FOR INDIVIDUAL ACTIVITIES - MASTERS AND OPERATORS

COD. HOMOGENEOUS GROUP	ACTIVITY	RISK FACTORS DESCRIPTION	PREVENTION AND PROTECTION MEASURES FOR THE ELIMINATION OR REDUCTION OF RISK TO ACCEPTABLE LEVELS
3	Workers / operators;	Contact with other employees of your business Use of common areas and rooms, such as toilets changing rooms, refreshment areas Contact with commonly used work equipment Contacts with third parties (Organization department)	Staggered admissions and differentiated entry / exit routes Restrictions on unauthorized access Access controls (self-certification, use of PPE body temperature) Remodeling of work groups to the bare minimum and according to the space available Remodeling of workspaces and interpersonal distancing within changing rooms and warehouses and / or application of protective barriers Use of appropriate PPE such as surgical masks or higher filtering level, availability of gloves disposable and disinfectant products of no lower than intermediate level Periodic cleaning, disinfection and sanitization of workplaces Segregation and / or quota for common areas Limitations in the movement within the workplace of all those present Risk training and information Limitation to the maximum level applicable in the sharing of work equipment and / or disinfection at each change of use Work procedures involving interpersonal distancing

## 14.4.3 EVALUATION FOR INDIVIDUAL ACTIVITIES - GOODS SUPPLIERS

COD. HOMOGENEOUS GROUP	ACTIVITY	RISK FACTORS DESCRIPTION	PREVENTION AND PROTECTION MEASURES FOR THE ELIMINATION OR REDUCTION OF RISK TO ACCEPTABLE LEVELS
4	External suppliers	Contact with other people present in the unloading, parking / waiting areas Sharing with their colleagues of transport vehicles (mainly passenger compartment) and relevant equipment of common use Possible contact with third parties	Differentiated routes and times for entry and exit Restrictions on unauthorized access Access controls (self-certification, use of PPE; body temperature); Remodeling of work groups to the bare minimum and according to the space available Remodeling of workspaces and spacing within all areas of the event Use of appropriate PPE such as surgical masks or higher filtering level, availability of disposable gloves and disinfectant products of no lower than intermediate level Cleaning, daily disinfection of the vehicle and periodic sanitation Inhibition of entry into the premises if not for undelayable necessity Limitation of entry to customer unloading areas; also, in these phases spacing and mask Segregation and / or quota for common areas Limitations in moving within the workplace Risk training and information Limitation to the maximum level applicable in the sharing of work equipment and / or disinfection at each change of use;

## 14.4.4 EVALUATION FOR INDIVIDUAL ACTIVITIES - MEDIA EMPLOYEES

COD. HOMOGENEOUS GROUP	ACTIVITY	RISK FACTORS DESCRIPTION	PREVENTION AND PROTECTION MEASURES FOR THE ELIMINATION OR REDUCTION OF RISK TO ACCEPTABLE LEVELS
5	Media	Contact with other people in the same job category Use of common areas and rooms, such as offices, television studios, obi van; conference room, press room, media working area Contact with commonly used equipment such as headphones, microphones, mixers; etc	Staggered admissions and differentiated entry / exit routes Restrictions on unauthorized access Access controls (self-certification, use of PPE body temperature) Remodeling of work groups to the bare minimum and according to the space available Remodeling of workspaces and interpersonal distancing within the workplace and / or application of protective barriers Use of appropriate PPE such as surgical masks or higher filtering level, availability of disposable gloves and disinfectant products of no lower than intermediate level Periodic cleaning, disinfection and sanitization of workplaces Segregation and / or quota for common areas Limitations in the movement within the workplace of all those present Risk training and information Limitation to the maximum level applicable in the sharing of common work equipment and / or disinfection at each change of use Interpersonal distancing in carrying out one's activities

## 14.4.5 EVALUATION FOR INDIVIDUAL ACTIVITIES - PUBLIC

COD. HOMOGENEOUS GROUP	ACTIVITY	RISK FACTORS DESCRIPTION	PREVENTION AND PROTECTION MEASURES FOR THE ELIMINATION OR REDUCTION OF RISK TO ACCEPTABLE LEVELS
6	Public	<p>Contact with third parties (other public present, access control operators; health control personnel, restaurant staff, commercial area employees)</p> <p>Use of common areas and rooms, such as stands, toilets, refreshment and commercial areas</p> <p>Possible contact with commonly used materials such as battens, handrails, separators, furnishings, etc.</p>	<p>Staggered admissions and differentiated entry / exit routes</p> <p>Body temperature check at the entrance</p> <p>Adequate spacing in the phases of access to the event area</p> <p>Adequate protections in the access control phases</p> <p>Adequate spacing in the phases of access and stay inside the stadium</p> <p>Adequate information on the risk and on the prevention and protection measures to be followed and on the hygiene measures to follow</p> <p>Remodeling of the capacity of the areas of the event;</p> <p>Use of appropriate PPE such as surgical masks or higher filtering level, availability of disposable gloves and disinfectant products of no lower than intermediate level;</p> <p>Periodic cleaning, disinfection and sanitation of the areas and premises for which use by the public is expected;</p> <p>Segregation and / or quota for common areas;</p> <p>Definition of circulation flows within the areas that limit gatherings and intersections;</p>

## 14.5 SUMMARY TABLE OF RISK VALUES ASSESSED FOR EACH CATEGORY IN FRONT OF THE APPLICATION OF PREVENTION AND PROTECTION MEASURES

INFECTION FROM SARS-CoV-2						
EXPOSED	DANGER	INDICATION OF PREVENTION AND PROTECTION MEASURES AND / OR IDENTIFIED PPE	RESIDUAL RISK LEVEL ASSESSMENT			LEVEL OF RISK
			Exp	Pro	Adj	
ORGANIZ.NE	POTENTIAL EXPOSURE TO THE SARS-CoV-2 VIRUS	THE PREVENTION AND PROTECTION MEASURES INDICATED WHEN CORRECTLY APPLIED, RETURN THE EXPOSURE, PROXIMITY AND AGGREGATION VALUES AND THE CONSEQUENT LEVEL OF RESIDUAL RISK SHOWN IN THE RIGHT COLUMN THE SPECIFICATION OF THE PREVENTION STRATEGIES AND THE MEASURES IMPLEMENTED IN FAVOR OF THE CONTRAST AND CONTAINMENT OF THE DIFFUSION OF THE VIRUS IS WIDELY DETAILED IN THE DOCUMENT	2	2	1,15	4,6 MEDIUM
RESTAURANTS AND COMM.LI			2	2	1,15	4,6 MEDIUM
MASTERS			1	2	1,15	2,3 low
SUPPLIED. EAST.			1	1	1,15	1,15 low
MEDIA			2	2	1,15	4,6 MEDIUM
PUBLIC			1	2	1,30	3,9 MEDIUM LOW

E: Exposure = the probability of coming into contact with sources of contagion in carrying out specific work activities  
P: Proximity = the intrinsic characteristics of work that do not allow for sufficient social distancing  
A: Aggregation = the type of work that involves contact with other subjects in addition to the company's workers

## 15. ATTACHMENTS

### Attachment 1

Participant self-certification (which is issued by the spectator when purchasing the ticket to access the stadium - ticket - on the Ticketone platform; upon accessing the stadium, the spectator must produce a copy of the self-certification result of the negativity test at Covid-19 performed at least 48 hours before the event, or the certification of vaccination or certification of the administration of the first dose of vaccine issued at least more than 15 days before the match / event (Article 14, paragraph 2 of Legislative Decree 18 May 2021 no. 65).

### Attachment 2

Acceptance of the anti Covid Protocol by Accreditators / Companies / Self-employed workers / Media-broadcasters

### Attachment 3

Covid weekly symptoms checklist (Group 02. Media-broadcaster)

### Attachment 4

Behavioral measures

### Attachment 5

Broadcaster behavioral measures

### Attachment 6

Guidelines for television broadcasters

### Attachment 7

Recommendations to the public

### Attachment 8

Guidelines for the resumption of economic activities updated to 28 April 2021 (Catering & Commerce)

## Attachment 9

Shared protocol for updating the measures for the contract and containment of the spread of the SARS-CoV-2 virus in the workplace updated to April 6, 2021

## Attachment 10

Monigo Covid-19 Stadium Map - match with a contingent audience

## Attachment 11

Letter constitution of the Committee that will observe the application of the rules of the protocol and covid signaling that is present at the Rugby stadium Monigo

## Attachment 12

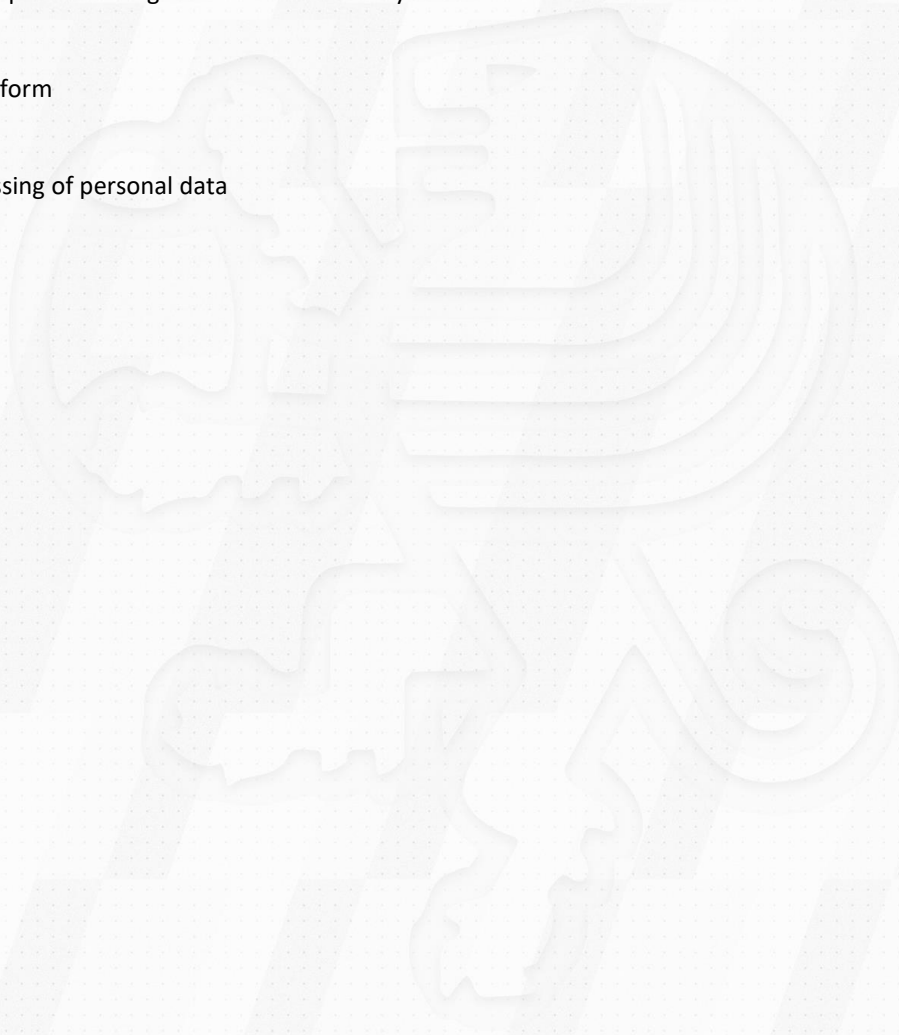

operational plan showing space-time organization of match day

## Attachment 13

Covid 19- Self declaration form

## Attachment 14

## INFORMATION ON THE PROCESSING OF PERSONAL DATA

Pursuant to art. 13 GDPR 679/2016

\*\*\*\*\*

THE ASD/SSD BENETTON RUGBY TREVISO SRL SSD (below the company), based in TREVISO, at Nascimben street 1/b 31100 TREVISO mail info@benettonrugby.it as Data Processing Owner, with regard to the processing of the personal data of those who will access the sports center during the pandemic from COVID-19, provides, under art. 13 GDPR 679/2016, the following information. The detection of body temperature as well as the acquisition of the declaration confirming the non-origin of the areas of epidemiological risk and the absence of contacts. In the last 14 days, with positive results to the Sars-Cov-2 virus, responsible for the COVID-19 pandemic, it is a treatment of personal data, including health, and, therefore, must take place in accordance with the European Data Protection Regulation GDPR 679/2016.

The processing of such personal data is based on the principles of: - lawfulness, fairness and transparency; - limitation of purpose; - data minimisation; - Accuracy; - limitation of conservation; - integrity and confidentiality and takes place in respect of fundamental rights, freedoms and in a way that ensures the confidentiality and dignity of people. In this way, in accordance with the terms of art. 13 of the 2016/679 EU Data Protection Regulation (GDPR), the company provides the following information.

### Purpose and legal basis of treatment

In accordance with the principle of the purpose limitation (Article 5, par. 1, lett. b), GDPR), personal data will be collected and processed exclusively for the purpose of preventing infection from COVID-19 and in order to implement anti-contagion safety protocols under art. 9, lett. b), GDPR.

For organizational and security measures the Company adopts organizational arrangements to ensure the confidentiality and dignity of people as well as appropriate security and organisational measures to protect the data collected.

### Specifically:

- the body temperature will be detected without recording the acquired data or the identity of the person concerned unless the temperature exceeds the threshold of 37.5 degrees;

- In the event that the Company requests the release of a statement stating that it is not from the areas of epidemiological risk and the absence of contact, in the last 14 days, with the resulting COVID-19 positive subjects, in accordance with the principle of so-called minimization (art. 5, par. 1.c), GDPR) will be collected only the necessary data, adequate and relevant to the prevention of contagion. The Company will therefore refrain from requesting additional information about the person who tested positive and/or information about the specificity of the places visited;

- The data will be collected and processed by those specifically responsible for this treatment and properly educated.

### Data retention period

The personal data collected for the purposes mentioned in this information will be retained until the end of the state of health emergency.

### Data communication and dissemination

The personal data collected will not be disclosed or communicated to third parties outside the specific regulatory forecasts. For example, the data may be communicated to the Health Authorities for the reconstruction of the supply chain of any "remaining contacts" of a person who tested positive for COVID-19 in order to allow the authorities themselves to apply the necessary and appropriate quarantine measures.

### Learn more

Those concerned may exercise their rights under Articles 13, paragraph 2, Letters (b) and (d), 15, 18, 19 and 21 of Regulation 679/2016, free of charge and without any constraints, by writing to the company's e-mail address.
